Better Service - Not a Goal, a Requirement

The healthAIR Group provides several programs that ensure compliance with yearly regulatory compliance issues. These annual activities are often forgot and when missed can cause both written and financial citations. The healthAIR Group has developed unique 3-year programs to ensure compliance without worry.

AHERA Yearly Services

Don't let your AHERA asbestos management plans get the best of you. It is important and required that certain responsibilities of the Designated Person be conducted on a yearly basis and management plans must contain the record keeping for these activities. Copies of requirements must be kept not only in each school building management plan but in the administration copy as well. healthAIR, inc. has developed a 3-year "contract" program to handle these requirements for you. The following required activities will be conducted:

- Five (5) 6-Month AHERA Periodic Surveillances
- One (1) 3-Year AHERA Reinspection
- Three (3) Annual Notifications
- Three (3) 2-Hour Asbestos Awareness Training Courses

All records will be maintained in each management plan by The healthAIR Group consultants and as it relates to these activities and other asbestos-related activities conducted throughout the school district. All costs will be averaged over the three (3) years ensuring that a heavy cost is not incurred during the year of the mandatory AHERA 3-year reinspection.

Storm Water Yearly Services

The healthAIR Group can develop a program to conduct your mid-year and yearly progress reports for the first five (5) years of your approved permit. Our program can be tailored to your current status and costs controlled based on contract length. Following the first five years of your storm water program, The healthAIR Group will offering programs to conduct your required bi-yearly progress reporting.

Please contact us to provide you with a proposal for either of these two yearly service agreements.
